**MCS COCA COLA:
LPG STEAM BOILER PROJECT**

Correlation chart

Reason for project implementation

Resolution No. 62

Of the Government of Mongolia on Prohibition of Raw coal

from 2018.02.28

What is the alternative solution?

Project overview

We are introducing the most efficient and newest model of LPG once-through boilers and vacuum type water heaters, the efficiency of the system is improved with less fuel consumption.

Project highlights

- MCS Coca Cola uses steam on both production stages and facility heating. Produces steam by operating raw coal fired steam boilers.
- LPG storing solved by building direct pipelines from UniGas import terminal storage tanks to MCS Coca Cola plant to feed boilers with LPG.

Fuel storage solution

DAEYEOL steam generating boiler

- Boiler model: DRH-400PG, total 4 units
- Steam production: 3,400 kg/hour
- Efficiency: 99%
- LPG consumption: 185.5 kg/hour (Butane 100)

Heat generating water boiler

- Model: NTEC boiler HGTL-630AP
- **Output:** 630,380 kcal/hour
- Efficiency: 95%
- LPG consumption: 47 kg/hour (Butane 100)

We are able to greatly reduce the use of coal and we contribute to the improvement of air pollution.

Future prospects

LPG has a lot of possibilities.

- Hold back of global warming.
- Energy cost reduction.
- Stable supply.

We are able to help you
in various ways of LPG.

Thank you for listening.
